

XNET YACHTING ASSOCIATION

State-of-the-art, Low Cost, High Speed HF Email and Weather Services

Welcome to the XNet Yachting Association. If you've been looking for *the most efficient email and most comprehensive weather available* via your HF radio and Pactor modem, XNet is the service for you!

XGATE

Extraordinary Wireless Gateway for HF EMAIL

The XGate e-mail and compression system, designed to work with XNet, is more efficient and user friendly than anything else available. Our rapidly growing customer base confirms that our patent pending compression is providing the best tools out there for essential information and email services – wherever they are. We offer quick connect time, trouble-free delivery and knowledgeable support. XGate, also branded as Oceans Mail, has rewritten the book on file transfer efficiency!

- Extremely simple user interface; up, running and handling email in minutes.
- Full support for attachments and HTML messaging.
- Flexible – supports Hotmail, MSN, Yahoo, Earthlink and other email services automatically. Use any email client such as Outlook, or use the built-in email client.
- E-mail account vessel@xnetmail.com
- E-mail forwarding available.
- Same e-mail program works on almost ANY Internet connection your computer can establish, including Sat phones (Iridium, Globalstar or Inmarsat), cell phones (GPRS), 56k dial-up, cable modem (ADSL) as well as on the (wireless) LAN at home or in the office. Xgate is all you need. Anytime.
- Webmail access at Internet Cafes
- User-selectable SPAM filtering / size filtering.
- Most efficient protocol we've seen!

WEATHERNET

Award Winning, Comprehensive WEATHER-ON-DEMAND

Use your radio for GRIB data, satellite imagery, surface height, NEXRAD, buoy charts, interactive weather, text weather, weather charts, customized reports and more. As recipient of Sail Magazine's Editor's Choice Award for technological innovation and with its patent pending technology, WeatherNet is revolutionizing how vessels receive weather information for navigation. Full support for WeatherNet now includes **FREE** AP News/Sports/ Business feeds!

XNET FREE SIGNAL WORKS AS SIMPLE AS 1,2,3

1. Free Signal land stations transmit audible tones to indicate they are ready to receive your traffic and to indicate propagation is open.
2. Your PTC-II modem hears the Free Signal transmission from the shore station and you transmit a request for connection.
3. Traffic management algorithm queues traffic from multiple callers, taking them in turn, so no one can jump in line.

Coverage

- 4 US stations provide excellent coverage along entire US East Coast, Gulf Coast, Western Caribbean, Bahamas, DR, Puerto Rico. Limited coverage Eastern & Southern Caribbean.
- 3 additional US stations are planned for early '06, with more coming online as necessary to increase capacity in primary coverage areas.
- Additional Eastern & Southern Caribbean coverage is being solidified.
- Trans-Atlantic and full European / Mediterranean coverage currently online with stations in England and Sweden.
- Limited South Pacific coverage, with station in New Zealand.
- More International stations scheduled in 2006.
